Biological Lake Cleaner w BioStart Complex - BIOLOGICAL Lake & Pond maintenance - 1 Gallon

"A Shallow Water Solution"-Create DEPTH by removing muck/sludge and protect from nutrient loading with Biological Concentrate.

LAKE CLEANER BIOLOGICAL- Treat your Lake or Pond Water with superior bacterial/enzyme performance.

LAKE CLEANER BIOLOGICAL Concentrate with BioStart Complex is uniquely formulated to deal with organic buildup in the bottoms of Lakes & Ponds. It utilizes a proprietary blend of highly concentrated bacteria with superior enzymatic activity that are specially designed to consume leaf debris, sludge, muck and nutrient loads that can cause problems in irrigation and recreational water usage. This liquid concentrate is equipped with BioStart, a first generation food complex uniquely formulated to give the spores of lake bacteria the start they need. This formula will densely cover your body of water with a rich blend of aerobic and anaerobic cultures that are naturally occurring in lakes and ponds throughout the world. This unique formula will aid in shallow water conditions by removing muck buildup, freeing up water depth and utilization of your body of water.

- ◆ Eco-Safe-Easy to use environmentally friendly, liquid bacterial formula.

- ◆ Formulated with BioStart, a special spore feeding complex.

- ◆ The Eco-Safe Choice for Pond Owners, Aquatic Managers and Golf Course Professionals

- ◆ No irrigation or water restrictions

- ◆ Nontoxic - Safe for fish and all wildlife

- ◆ Made in The USA

Give your lake, pond or fountain a beautiful, natural depth with this blend of Eco-Safe environmentally friendly, nontoxic, water-soluble bacteria/enzymes. This highly concentrated formula is designed to enhance depth in shallow water conditions by breaking down and digesting organic buildup on the bottom of lakes and ponds.

DIRECTIONS:

Each Gallon is formulated to treat 1 full acre of water 4-6 ft. in depth. Easily pour in each gallon at several points around the lake or pond. The spores are activated with BioStart Complex on contact with the water. Water temperature and degree of agitation can influence dispersion of BIOLOGICAL Concentrate. For 1 Acre of water 4-6 ft. deep use 1 Gallon BIOLOGICAL Concentrate. There are NO irrigation or water restrictions. We recommend a 1 gallon per month dose for 6 months and then a 60 - 90 day interval can be used for ongoing bacterial support.

Packaged 4/1 per case. 144 cases per pallet. 2011 The ECO-Safe Pond 2 O Professional Pond Program. All rights reserved.

Helpful Hints Section

- 1) Treatments should begin as soon as possible for new ponds and problem ponds. 1 treatment every 30 days for startup/problem ponds.
- 2) To achieve optimum performance, biologicals should be applied all year long. Intervals of 60-90 days are preferred after startup. Amount of muck debris, nutrient loading, fertilizer runoff and outflow can impact this schedule. Treat to desired depth.
- 3) Optimal water temperatures for treatment are 60 degrees or higher. Biologicals can be added to ponds in winter season, even when the pond freezes over. These treatments can be placed at the lower depth of the pond where water temps are a constant 40 degrees. The formula contains cold water strains that still function/metabolize at lower temperatures. The process is slower in colder water under 40 degrees, but can still impact the aquatic environment favorably while consuming micronutrients.
- 4) Turbid water can have a large amount of organics/floating particulate. The biological cannot consume inorganic material so it is important to know the difference. Water color can be affected by floating particulate. Turbid water conditions contribute to poor aesthetics but can also disguise muck problems. Re-treat body of water until you achieve your desired water depth.
- 5) This product is Eco-safe and will NOT cause harm to environment.
- 6) For cleanup or spills, wash hands or clothes with soap.

BIO Throw Pack

Muck Remover with BioStart Complex in a water soluble pack

BIOLOGICAL WSP Lake & Pond Cleaner

"A Shallow Water Solution" - Create DEPTH and protect from nutrient loading with Biological Lake & Pond Cleaner.

BIOLOGICAL WSP CONCENTRATE - Treat your Lake or Pond Water with superior bacterial/enzyme performance.

Pond 20 BIOLOGICAL WSP Lake & Pond Cleaner is uniquely formulated to deal with heavy organic buildup in the bottoms of lakes & ponds. It utilizes a proprietary blend of highly concentrated enzyme producing bacteria that are specially designed to consume leaf debris, sludge, muck and nutrient loads that can cause problems in irrigation and recreational water usage. This dry soluble blend is easily applied and covers your body of water with a rich blend of aerobic and an-aerobic cultures that are naturally occurring in lakes and ponds throughout the world. This unique formula will aid in shallow water conditions by removing muck buildup freeing up water depth and utilization of your body of water.

- ◆ Eco-Safe-Easy to use environmentally friendly, Water Soluble Pack-Concentrate.
- ◆ The Eco-Safe Choice for aquatic environments.
 - ◆ No irrigation or water restrictions
 - ◆ Nontoxic-Safe for fish and all wildlife
 - ◆ Made in The USA

Give your lake, pond or fountain a beautiful, natural depth with this blend of Eco-Safe environmentally friendly, nontoxic, water-soluble bacteria/enzymes. This highly concentrated formula is designed to enhance depth in shallow water conditions by breaking down and digesting organic buildup on the bottom of lakes and ponds.

DIRECTIONS:

Each 8 oz. WSP is formulated to treat ¼ acre of water 4-6 ft. in depth. Easily toss in each pack around the lake or pond. The spores are activated on contact with the water or a food source. Water temperature and degree of agitation can influence dispersion of BIOLOGICAL Lake & Pond Cleaner. For 1 Acre of water 4-6 ft. deep use 4-8oz. packs of BIOLOGICAL Lake & Pond Cleaner. There are NO irrigation or water restrictions. We recommend a 4-pack box. *2011 The Eco-Safe Pond 20 Professional Pond Program. All rights reserved.*

BIO MUCK BLOCK

Muck Remover with BioStart Complex in self-inserting spike

Pond₂ Bio Muck Blocks offer a new way to minimize settled sludge volume and reduce organic buildup/solids in beach areas, pier spaces and in retention ponds and lagoons. Bio Muck Blocks are made via a process that creates a dense spike that rapidly sinks to the bottom of a lagoon, even when applied at the water's surface. This makes dosing easy and ensures contact between the microorganisms and the sludge. It is also easily applied to problem build-up areas to eliminate nasty buildup around your shoreline.

Muck Blocks sink to the bottom of the water and release billions of microorganisms, powerful enzymes, and essential micronutrients directly into the sludge layer. This combination ensures rapid stimulation of biological activity and reduction of the sludge layer. This reduces the dredging frequency, increases aesthetic water quality, and improves overall use of water

DIRECTIONS:

Treat with 4 lbs of BIO Muck Blocks in affected area every 30 days until muck build up is gone. Treat up to 2000 sq. ft. with 4# of BIO Muck Blocks. Place spikes directly into muck. Eco-Safe: This product is food grade and safe for potable water. Restrictions: None
